3rd	Marconae Tree	Ian Hook

Show & Tell -- March 2015

John Schembri opened our S&T segment with two plants he wished to have identified, both came from the garden of an elderly lady. Both were a little elongated and in need of some TLC. The first, marmorata type could be *Neo. Julian Nally* and the othersomething similar to *Neo Green Bands* or *Fancy Pants*. Growing on may clarify the identity.

Ian Hook showed a plant he got from our raffle table . It was thought to be an *Aechmea fasciata var purpurea*, though the leaves were a little narrow.

Kerry McNicol had two similar *Vrieseas*. One named *Vriesea rodigaseana*. A plant with green leaves with some red speckles under the leaves in high light. The inflorescence has a scarlet scape with bright yellow floral bracts and flowers. This keys correctly with *Vr. rodigaseana*. The 2nd plant is very similar, red speckles under the leaves, tall green/pink scape with yellow floral bracts and flowers. The second plant is almost 2x the width and height of the first. The second plant could not be identified. **Comments and ideas gratefully received!**

Werner Raff showed us the loop hook rug, which was made by Grace Goode, raffled at the world conference in Cairns, 2008, won by Margaret Draddy and now donated to the club for auction at Bromsmatta by her family.

Bromelains:

Medicinal uses of the Bromelaceae Family

Compiled by Editor from :-Wikipedia; 'Bromelain / University of Maryland Medical Center' + other readings

Bromeliads have long been a food source for the native peoples of Central and South America. There is also a long traditional use of these plants for medicinal purposes. Pineapple has been used for centuries by the indigenous people to treat indigestion and reduce inflammation

Bromelain is a protein extract derived from the stems and fruits of pineapples. The term '**bromelain**' may also refer to either of two protease enzymes (leaf & stem) extracted from the plants of the family Bromeliaceae, or it may refer to a combination of those enzymes along with other compounds produced in an extract.

The first isolation of the enzyme was recorded by the Venezuelan chemist Vicente Marcano in 1891 by fermenting the fruit of pineapple. In 1892, Russell Henry Chittenden, assisted by Elliott P. Joslin and Frank Sherman Meara, investigated the matter more completely, and called it 'bromelin'. Later, the term '**bromelain**' was introduced and originally applied to any protease from any member of the plant family Bromeliaceae.

Bromelain is present in all parts of the pineapple plant (*Ananas* sp.), but the stem is the most common commercial source, presumably because large quantities are readily available after the fruit has been harvested.

Use in Meat Tenderizing

Along with *papain*, **bromelain** is one of the most popular proteases to use for meat tenderizing. **Bromelain** may be used in a powdered form, which is combined with a marinade, or directly sprinkled on the uncooked meat.

Cooked or canned pineapple does not have a tenderizing effect, as the enzymes are 'heat-labile' and destroyed in the cooking process. Some prepared meat products, such as meatballs and commercially available marinades, include pineapple and/or pineapple-derived ingredients.

Potential Medical Uses

Available in some countries as a product under the name 'Ananase', bromelain began its reputation for various uses in folk medicine.

Bromelain can be used to treat a number of conditions, but it is particularly effective in reducing inflammation from infection and injuries.

Surgery, Sprains and Strains, and Tendinitis

Although studies show mixed results, **bromelain** may reduce swelling, bruising, healing time, and pain after surgery and physical injuries. It is often used to reduce inflammation from with tendinitis, sprains and strains, and other minor muscle injuries. Studies of people having dental, nasal, and foot surgeries found it did reduce inflammation. In Europe, **bromelain** is used to treat sinus and nasal swelling following ear, nose, and throat surgery or trauma.

Wounds and Burns

Some studies of animals suggest that bromelain, when applied to the skin, may be useful in removing dead tissue, a process called debridement, from third-degree burns. One preliminary study using a debridement agent that is derived from bromelain to treat people with second- and third-degree burns showed a benefit. Severe burns require a doctor's care. **Do not apply bromelain to broken skin.**

Sinusitis (Sinus inflammation)

Although not all studies agree, **bromelain** may help reduce cough and nasal mucus associated with sinusitis, and relieve the swelling and inflammation caused by hay fever. (*Ever been told to drink pineapple juice for a sore throat?*)

Arthritis

Studies show mixed results, but one study suggested that a combination of **bromelain**, rutosid, and trypsin worked as well as nonsteroidal anti-inflammatory drugs, which are commonly used pain relievers, for reducing knee pain from osteoarthritis. NSAIDs include ibuprofen (Advil or Motrin), naproxen (Aleve), and diclofenac (Voltaren), among others.

Some early studies suggest that **bromelain** may also help reduce pain in people with rheumatoid arthritis, but the results are not certain.

Infection

Some evidence from test tube and animal studies suggests that **bromelain** can kill some viruses and bacteria. But more research, including human studies, is needed to see whether it truly works.

CHECK WITH YOUR PRACTITIONER BEFORE USING BROMELAIN EXTRACT

Well, *BROMSMATTA* has come and gone, not without some last minute hitches, but, seemingly by all accounts it was a re-sounding success, with a great time being had by all.

The committee would like to thanks all those, registrants and volunteers who attended for making the experience so memorable. The Novotel was a great venue for all proceedings, with the staff being very accommodating of any late changes that were needed to be made.

It was very fortuitous that we did not choose the following week in which to hold the event The rain had already begun to fall as the last of us were leaving on Monday morning.

The Harbour Cruise proved a great hit, with the weather being 'perfect' for the event, even locals thought it was 'great'.

Our speakers all proved that there is always more to be learnt about the amazing world of growing bromeliads. There were many chances to chat to everyone and answer any questions we might still have for them. Many speakers and registrants renewed old friendships and, of course, made new ones.

The competition plants were of an outstanding quality. A good number of the awards went to our local members, as well as to those Australia wide. Results of the completion will be displayed in the following pages.

Sales were very lively, with many of us going back again and again, just in case we had missed that plant that we really needed! Public sales on both Saturday & Sunday were hectic, with quite a few local sellers having to go home and replenish their stock. Quite a few of the interstate sellers were very nicely surprised at how few plants they were taking home.

All in all, the Conference was a great success and a fantastic time was had by all. See you in 2017 at '**Sunnybroms**'.

Vale *Laila Astill*

Passed away 3rd April 2015

Sadly, we have lost another of our valued members, Laila Astill. Laila passed away in her sleep on 3rd April 2015, leaving everyone who knew her, stunned, and much poorer for her passing.

Laila was born in Italy and, with her family, moved to Australia when she was 4 years old. Laila was a nurse, when she and Stephen met. They had one son, Tristraum, who grew up to be a strong family man, presenting her with two grandchildren, Tyrone, and Elanor who was born early on Thursday 2nd April. It would be of some comfort

to Stephen and Tristraum, to know that she had been able to welcome her grand-daughter into the world.

Laila and husband, Stephen, were regular attendees at our monthly meetings, travelling from the Woolongong area where they lived. Laila was also active members of the Illawarra Bromeliad Society, as well as in many horticultural societies and other garden clubs. They include, the Rose Society where she was a member for over 30 years, the Royal Horticultural Society, The Dahlia Society, as well as her beloved Oak Flats Gardening Club.

Laila loved the ABC radio gardening program, where she was on every week winning competitions or giving advice and had made friends with a number of the presenters. She could always be found at a party or function in the corner talking with one of them. They, along with members of the program's audience, were there to farewell her.

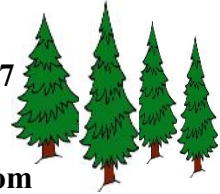

There was a spare chair at our Bromsmatta Conference, for Laila. Both she and Stephen were looking forward to attending, and both were remembered and greatly missed.

Laila is now at peace, and will continue on in our memories.

Show & Tell

Werner Raff displayed two beautiful tillandsias in flower. The first *T. copanensis* which he got from Michael Ferenczi a few years ago. The other, and an unknown cross from Ken Woods, a tall capitata type plant which, Ken Woods noted that he might not have parted with it if he knew how it would turn out.

Helga Nitschke had plants for identification, the first easily recognised as *T. stricta* var *nigra*, and another *stricta* type plant. Helga will bring it next month when it flowers.

Kerry McNicol showed *Quesnelia lateralis*, which had its 3rd flower spike. This *quesnelia* flowers several times from the one plant, from different 'buds' on the central core of the plant. The plant has grown well under trees, but doesn't like the heat of summer.

Terry Davis showed us how to trim leaves acceptably. The trimming template he uses is cut, from venetian blind, to the exact leaf shape. This should be done on the morning of the competition as the cut will brown off in a few days.

WELCOME TO NEW MEMBERS.

We continue to attract new members into the Society and would like to welcome our most recent enthusiasts:

Howard & Leanne Martin, Ron & Beryl Brown, Jasmina Hazrolaj,
have recently joined our group. If you would like to become a
Member, please see details below.

MEMBERSHIP APPLICATION:

ANNUAL SUBSCRIPTION: Renewal due January 1st for membership year January to December.

Membership: Australia A\$20

Overseas Membership: Asia/Pacific Zone A\$30. Rest of the World A\$35.

New Membership requires a \$5 joining fee, plus Annual Subscription.

(Those joining after October 1st are covered for the following year.)

Note: Un-financial members must add \$5 rejoining fee when re-applying for membership.

Members will become 'un-financial' if renewals have not been received by the end of our Autumn Show (Bromsmatta in 2015)

MAIL ORDER PAYMENTS BY MASTERCARD/VISA.

(Subject to A\$10.00 minimum.)

Members using Mastercard or Visa mail order facility should provide the following details, printed clearly in block letters, on a separate sheet of paper:-

- Name and address of **MEMBER**.
- **TYPE** of card (e.g. Visa, Mastercard)
- **CARDHOLDER** name details, as shown on card.
- Mastercard/Visa number and expiry date.
- **CARDHOLDER** signature (essential).
- Payment details (membership renewal, book purchase, postage, etc.) with \$A amounts for each item.

SEED BANK

Thanks go to all those who have donated seed.

Seeds cost 50¢ per packet for Members and Seed Bank supporters (plus postage) or \$1 per packet (plus postage) for all other enquiries:

Enquiries for seeds should be directed to

Terry Davis

(02) 9636 6114 or 0439 343 809

Below is the list of **most recently** added seed to our Seed Bank.
